DETAILED ACTION

Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 17-32 and 42-49, drawn to folded MOS transistor comprising a drain and source with a folded channel between, classified in class 326, subclass 52.
 - II. Claims 33-41, drawn to generation of a random number based on an authentication function which uses a secret key, classified in class 380, subclass 44.

The inventions are distinct, each from the other because of the following reasons:

1. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, inventions I-II have separate utility such as Group I is directed towards a folded MOS transistor comprising a drain and source with a folded channel between and Group II is directed towards generation of a random number based on an authentication function which uses a secret key. See MPEP § 806.05(d).
2. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2131

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
4. The examiner notes that claims 33-41 have been indicated allowable over prior art.
